

Aircraft accessory repair company located on Long Island, New York is seeking an experienced electronics technician for a full time position. Qualified candidate must have 5+ years verifiable work history on aircraft electronic accessories.

Applicant must be able to perform a variety of complex technical functions related to the troubleshooting, testing and repair of mechanical, electrical and electronic aircraft accessories. As part of these functions applicant must also demonstrate the ability to test accessories for load capabilities, mechanical characteristics, polarity, voltage, amperage, inductance, shorts, grounds, circuit's continuity and physical properties. This will require the ability to also demonstrate utilization of various test equipment such as volt meters, oscilloscopes, wave form generators and other test equipment in the troubleshooting and repair of accessories. Troubleshooting will require knowledge of both analog and digital circuits and includes the ability to comprehend and understand blue prints, diagrams and schematics. Upon diagnosis must be able to effectively perform, document and communicate the results of the failure analysis

Candidate will also have an understanding of FAA rules and regulations, be able to multi task and work within a fast paced work environment and possess good communication, organizational, written and interpersonal skills. Position can lead to advancement in company so the ability to give direction and guidance in aircraft electronics troubleshooting techniques and repair is valuable.

Hours are Monday – Friday 7:30 – 4:00pm. Company has medical, dental and 401K benefits and salary is dependent upon experience.
